agriculture and it helps to increase the food production of the region.

It is also necessary to control the over urban population because it creates so many problems like, slums, environmental pollution and it affects on the agriculture on the region. Sufficient agricultural land should be spare in every urban center and its use strictly for only food crops. It helps to control the excess density of caloric, physiographical as well as agricultural.

In rural area the farmer should tries the production of vegetables or fruits in particular land, it will increase the economical growth and helps again the control the excess density.

Lonar Tourist Place: A Geographical study

Dilip.N.Lanjewar
Asst.prof.

Head, Department of Geography
Matoshri Shantabai Gote College, Washim

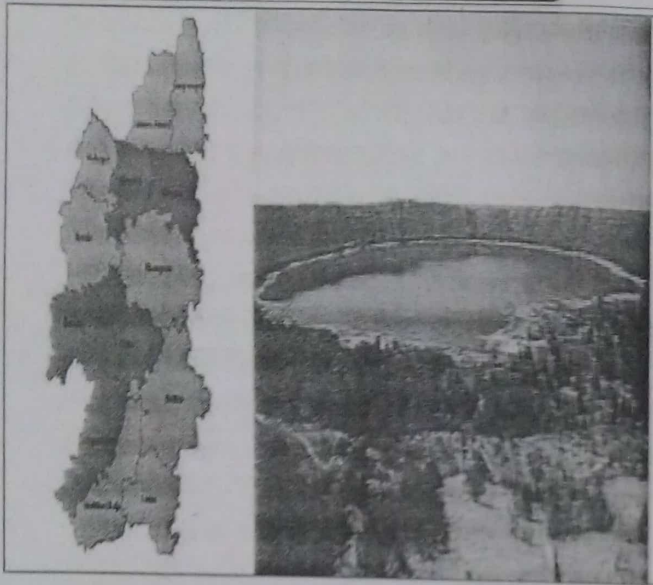

Introduction : -

Journey is a very ancient and eternal thing. It attract man from the origin primarily it was without intention sense of feeling and it was simple. But now a days, it becomes very sophisticated . man travels, Journies to get much more happiness, harmony or for his interest. In ancient days there were numbers of pilgrims or sailors out new regions , Territories.

Today's, Journey supported with joining of Tourism is a new branch of Economical Geography, so it is challenging field for researchers, inventors. But this concept is changing according to circumstances. In modern age it is developing more and more due to Technical progress, Industrialization and urbanization and its pollution as well as cultural and recreation

Study Area :-

For the present research papers study Lonar crater in Buldhana district of Maharashtra is chosen. The Elaboration of Lonar crater is 19° 58' 86" Latitude North and 76° 30' 30" Longitude East it is occupied with the area of 8 k.m. The depth from the surface is 150 meter. Generally the atmosphere of this area is dry and hot type. Aggregate rain fall near about 77 cm in the month of July. Wide black soil mainly finds in this area.

Hypothesis :-

- 1 Lonar tourist place fiends with the more impact of Geographical element.
- 2 It is approved the status as world tourist place.
- 3 But yet it has not been developed expected portion as well as.
- 4 It is essential to make the efforts to retain the nature of the area.

Methods of Research Work :-

At the Geographical study of the problems of Lonar crater tourist place and Remedies the Buldhana district Gazetteers, practically the interviews of the tourist, Article in journals, Newspapers and other secondary sourced are used and the study has been completed with the problems and the remedial planning by which the problems may be controlled and annualized.

Interpretation :-

The Lonar crater is unique one in the world which is very surprising and important for Geological and Astrological research. It is store/treasure house of world history and mythological things with its salty water. There are numbers of mythological and historical tales, stories about the creation, origin of Lonar crater. The upper part of Lonar crater is in circle and its circumference is six km. In the mid of circling craters part, the salty water occupied with 5 to

6 meter on depth. Lower circumference of the crater is 4 km. The edges of the crater is slopping down 80 to 100 Degree and covered with dark and dense forest with trees. On the shore of the crater, there are numbers of temples constructed in ancient 12th and 13th centuries. Outer side of the crater, the fountain of the clean and fresh water is flowing continuously. It is considered that it is originated from the river Ganga. In this group of Dhar temples, the stream following continuously for Twelve month. The water of Lonar crater is salty. Upto seven times to Ocean water. The elements of chloride and fluoride are in major portion amount. The lower part of the crater is with complete basalt rocks. So it is highly impossible to fetch the water. Only the water lessen or decrease due evoporaization by the hot temperature.

Such type of world store house of the nature is at Lonar in Buldhana District of Maharashtra. But even the inhabitants of the area i.e. Lonar and Buldhana are unknown to this treasure of the nature and its important value. In the Liberalization of Globalization the big cities have given to the nearby numbers of places the status of world tourist places. Only in rarity of exception in few, the places are neglected unfortunately from such the status as the world tourist places. Lonar crater is near by to neglected places which has a treasure of nature stored before 50 Thousands years with wonders. It becomes the tourist, Though the Lonar crater has a treasure of art of sculpting of ancient mythological tales and stories, Geology and astrology, zoos ornithologists herbal medicine but in the last century it should have to the developed in equal to the expectation it could not be done. It had the status of tourist place but on the paper actually it was neglected. After 1992 as tourist centre. The development has been started. In the accreditation lonar crater got A grade status by the central and the state government. But the facilities of tourism and forestry is very low and neglected. The

retaining of lonar crater is a big challenge. The polluted water derange flowed in the crater from near by area, field in large amount. It is dangerous thing from the polluted water to the lonar crater's existence. The medicinal herbals plants, trees are going to decay, ruin day by day. The condition of ancient temples in the catering area are not good. It is going to the destroy, fall down. The temple of Dyatya sudan of lonar is more beautiful than konark surya temple the supervision and watch is neglected by the archeology Department. As same situation condition is about the travelling facilities in the area. So and however the lonar creter having the status of the world tourist place but till the information and knowledge is not reached to the people in majority of the area as well as of the world. Until and unless the proper methods and techniques are used and taken care of the development of this area, it can not become famous popular as the status of world tourist place to the place.

Suggestion of Remedies :-

- 1 It is essential to make available the facilities of travelling mode's and means .
- 2 The mixing polluted water should be controlled to retain the natural existence of crater and area.
- 3 It is essential to control the pollution made by the pilgrims and tourists.
- 4 The Department of Archeology should have to take care of the archeological thing and elements.
- 5 Necessity of plantation in this area to control the temperature and vaporization of catering water.
- 6 The Government should organize the lonar crater celebration programmers to attract tourist and make aware of the place and it's important value to retain as well as the place should be provided the facilities of standard lodging and bodings.
